

Real Estate SaaS Platform

I. Technologies

Frontend: Next.js (App Router), Tailwind CSS, Shadcn UI, React Hook Form, Zod, Zustand, React-Map-GL.

Backend: Next.js API Routes / Server Actions, Node.js (Edge & Node runtimes), Mongoose.

Database & Search: MongoDB Atlas, Meilisearch.

Infrastructure & APIs: AWS S3 (Storage), Mapbox (Maps), Stripe (Payments), Resend (Emails).

II. Complete Feature List

1. User Authentication & Role-Based Access Control (User, Admin).
2. Multi-category Property Creation (Apartment, House, Room Share, Commercial).
3. Property Management (Edit, Delete, Draft, Publish).
4. Image Gallery & Media Uploads.
5. Dynamic SEO Management per listing (Title, Meta Description, OG Image).
6. Sub-50ms Global Search Engine (Powered by Meilisearch): Typo-tolerant keyword matching across titles, descriptions, and locations.
7. Faceted Filtering Layer: Instant frontend sidebar filtering (Price range, beds/baths, property categories) using Meilisearch facets without hitting MongoDB.
8. Geospatial Map Search: Map bounding-box and radius filter using Meilisearch native `_geo` queries.
9. Automated Sync Engine: Database middleware (Mongoose change streams or pre/post hooks) that instantly pushes property updates, modifications, or deletions to Meilisearch.
10. Inquiry & Lead Management (Messaging/Deals).
11. Saved Properties & Favorites list.
12. Public User Profiles (Agent/Owner pages).
13. Property Analytics (Views, Clicks, Leads visible to owners).
14. Email & In-App Notifications (New leads, approvals, plan changes).
15. Freemium to Premium Upgrade Flow (Stripe integration).
16. Automated Feature Gating (Locking features based on active plan limits).
17. Verified User Badge & Privileges.
18. Admin Dashboard (Platform metrics, revenue, active listings).
19. Admin Property Moderation (Approve, reject, manual feature).
20. Admin Plan & Tier Management (Syncs with Stripe).
21. Admin User Management (Ban, verify, view details).
22. Content Management System (Blog, FAQ, Policies).

III. 7-Week Milestone Breakdown

1. **Architecture & Authentication:** Week 1
Setup Next.js, Tailwind, Shadcn UI, and MongoDB database connections. Implement JWT authentication, Role-Based Access Control (RBAC), and basic user profile creation.
2. **Core Property Engine:** Week 2
Define Mongoose schemas and discriminators. Build multi-step listing forms for all property categories. Implement image uploads and map SEO fields. Setup a local or cloud Meilisearch instance, define indexes (filterable/sortable attributes), and create Mongoose `post( ' save ' )` hooks to automatically sync properties to Meilisearch.
3. **Search & Discovery:** Week 3
Build the public property directory using `@meilisearch/instant-meilisearch`. Implement instant faceted filtering (price, categories) and geospatial radius map search (`_geo` queries). Ensure SSR compatibility and dynamic Open Graph tags are functioning for platform SEO.
4. **User Interactions & Leads:** Week 4
Build individual property detail pages. Implement the Deals/Leads system for user inquiries. Add the "Saved Properties" and basic notification features.
5. **Admin Control Center:** Week 5
Construct Admin dashboard data tables. Implement property moderation workflows (approve/reject), user management, and the basic CMS for publishing site content.
6. **SaaS Monetization:** Week 6
Integrate Stripe Checkout and Customer Portal. Connect Stripe Webhooks. Build backend middleware to lock premium features and enforce plan limits. Implement the manual "Verified" tier.
7. **Optimization & Launch:** Week 7
Implement property analytics for owners. Run a full Meilisearch indexing re-sync script validation. Conduct end-to-end bug testing, run Core Web Vitals audits, optimize image loading, and deploy to production.
